

The Prevent formula is to be used to prevent a serious symptoms by boosting the immune response. Take this formula if you think you have been exposed. If you become symptomatic, stop taking this formula as it might increase the immune response, which can increase the severity of symptoms. Due to the fact this formula increases immune response it might aggravate your response to allergens too. You might gargle with this formula before swallowing to increase exposure of your mucus membranes to the herbs.

Prevent Formula

Dosage;1 dropper full (30 drops) 4 to 6 times a day May double dose or more for high exposure and large body mass.

Formula ingredients and Rational;

Jiao Gu Lan Gynostema has the same chemistry as Ginseng and is a Qi Tonic, Adaptogen that stimulates the immune system and increases the bodies ability to tolerate stress.

Some versions might contain Ganoderma tincture instead which is also a powerful Adaptogen.

Sida Accua/Rombifolia is a mallow, which is antimicrobial, nourishes the blood, and increases cell wall resistance to entry by viruses and parasites. It is antimalarial and some improvement in some viral infections has been seen using antimalarial drugs. Lomatium dissectum; is strongly antimicrobial, and its resinous properties increase the protective coating on our mucus membranes deactivating microbes which try to attach and gain entry.

Elderflower; is antimicrobial and increases immune response to prevent serious infection.

Elderberry; is antimicrobial and improves the immune response

Hu Zhang, Japanese Knot weed; is a antimicrobial which also inhibits over activity of the immune system, stops cough, protects against cytokine storm.

Bidens is a local weed that is considered to be an underutilized Heat Toxin herb. It can protect the cilia of the lung from the paralyzing effects of respiratory microbes. It helps to keep the lungs clear by allowing them to push fluids up from the base.

Hou Po is Magnolia Bark and is an Aromatic Transform Damp herb that helps to strengthen the digestive system. This approach is very helpful for damp type pathology.

Star Anise is a Warm Interior herb that was the source of the first Tamaflu. It flavors the formula and protects the digestion from the damp affects of some conditions such as nausea vomiting

Lian Cao is an antimicrobial herb and helps to remove microbial toxins.

Hawthorne helps to inhibit microbes from attaching to the ACE2 receptors which certain infections destroy. Blocking these sites protects the body from shock.

Early formula is for the onset of early symptoms, which could be gastrointestinal or respiratory. This stage might include body aches, headache, chill, fever, cough, sore throat, sinus congestion, nausea, vomiting, diarrhea, loss of appetite, taste, smell, indigestion, fatigue, sweats, etc.

Stop the Prevent, take up to 2 dropper fulls of Early per hour. Each dropper full is about 30 drops.

Early Formula

Dosage 1 dropper full per hour. 10 drops per hour for a child 2 to 3 dropper full for large adult.

Formula Ingredients and Rational;

Stevia for sweetening and to break thru any biofilm formed by pathogens

Andrographis King of Bitters. This is a strong antimicrobial and can remove heat toxins from the body

Sida Accua/Rombifolia is a mallow, which is antimicrobial, nourishes the blood, and increases cell wall resistance to entry by microbes and parasites. It is antimalarial and some improvement has been seen using antimalarial drugs

Elder leaf is capable of because it suppresses the central nervous system of suppressing a cough. It also inhibits cytokine storm with fluid build up in the lungs. It is mildly antimicrobial. It can release the exterior and cause a sweat lowering fever.

Star Anise is a Warm Interior herb that was the source of the first Tamaflu. It flavors the formula and protects the digestion from the damp affects of the pathogens such as nausea vomiting

Lomatium dissectum; is strongly antimicrobial and its resinous properties increase the protective coating on our mucus membranes deactivating viruses which try to attach and gain entry.

Bidens is a local weed that is considered to be an underutilized Heat Toxin herb. It can protect the cilia of the lung from the paralyzing effects of certain pathogens It helps to keep the lungs clear by allowing them to push fluids up from the base.

Pi Pai Ye is Loquat Leaf and is cooling to the lung and stomach, it teats cough and vomiting

Lu Lu Tong is Sweet Gum balls/Leaf and or Hawthorne protect the ACE 2 inhibitor sites from the destruction of pathogens. If these sites are destroyed it will prevent the body from being able to respond to shock.

Mid-Serious formula is to be taken when, and if you experience **SHORTNESS of BREATH**. This formula inhibits the immune system from filling the lungs with inflammatory fluids. The larger the dose the more you might experience violent diarrhea. This is intended to drain the lymph system so the fluids can drain from the lungs thru the intestines. This is a serious situation and medical attention might be needed such as oxygen or intubation. If you start to feel better you can reduce the dose but be aware that some symptoms can come and go for days to weeks before becoming severe. Average time before becoming severe after symptoms start is variable and might be a few days to 3 weeks.

Mid Serious Formula

Dosage 1 dropper full per hour. 10 drops per hour for a child 2 to 3 dropper full for large adult.

Stevia for sweetening and to break thru any biofilm formed by pathogens
